Claudio Alberton Batista

Technology Development Manager (MBA) | Sr. IT Operations Engineer | Software Architect & Engineer | IT Consultant
Araucária, Paraná, Brazil

Summary

Technology Development Manager and Software Architect with 19+ years leading innovation across automotive manufacturing and gaming industries. Designed patented 3D alignment systems deployed across Latin America, and currently improving global IT infrastructure and automation for a Canadian game company. Architected world-class software including the world's most advanced laser alignment systems and Latin America's first AI-powered 3D aligner. Specializes in full-stack development (.NET, SQL Server), cloud solutions (AWS), AI-powered workflows, and building scalable systems that drive measurable productivity gains. Results include multiple patents and enterprise-level automation solutions for major brands.

Some achievements in development projects:

Aligner Digi 4: A groundbreaking project that revolutionized the alignment of both light and heavy vehicles, enabling the detection of laser beams in outdoor environments at distances exceeding 20 meters, it remains the world's most advanced laser aligner to date.

Aligner 3D Flash: The first three-dimensional aligner in Latin America for light vehicles, standing out in the market for its innovation and precision.

Aligner 3D Flash II: This aligner features an integrated central camera that uses advanced artificial intelligence to detect vehicle plates. Its intuitive software streamlines operations and significantly boosts service productivity.

TcDataCloud: An automated database updating solution that uses the AWS cloud to update the equipment's vehicle databases in real time, optimizing processes and facilitating the maintenance of up-to-date information.

Dynamic Software Block: a robust Windows service engineered for proactive application control. Seamlessly integrated with an intuitive management portal using AWS services, this solution empowers IT administrators to block unauthorized Truck Center softwares in real time, ensuring that security policies are always enforced (Dynamic Blocking; Integrated Management Portal ; Offline Self-Locking Mechanism)

These achievements represent a commitment to innovation and a constant pursuit of solutions that meet the needs of Brazil's automotive equipment market.

Experience

Uken Games

Senior IT Operations Engineer

April 2026 - Present (1 month)

Toronto, Ontário, Canadá

I started to work with Uken to transform IT operations into a streamlined, automation-driven, and secure ecosystem. With a focus on process excellence and strong data governance, I delivered impactful improvements across device management, licensing, onboarding/offboarding, and compliance.

IT Systems & Automation

- Internal Management Platform: Designed and launched a centralized system to control device lifecycles, subscriptions, and approvals.
- Workflow Integration: Unified operations across Slack, BambooHR, and internal systems; engineered Slack-to-Jira workflows with full audit logs.
- AI & Scalability: Architected AI workflows and proprietary tools to automate playable ad production, delivering dozens of interactive creatives while drastically reducing overhead.

IT Support & Employee Experience

- Service Management: Built a Jira-based support model with streamlined prioritization and automated workflows.
- Lifecycle Governance: Standardized onboarding/offboarding documentation and established foundations for zero-touch deployment.

- **Process Reliability:** Increased response reliability through structured automation and proactive renewal dashboards.

Asset & Cost Optimization

- **Device Logistics:** Implemented scalable distribution and secure return logistics; introduced a resale strategy for post-upgrade equipment.
- **SaaS Management:** Conducted software audits and refined licensing strategies to optimize costs and strengthen access governance.
- **Data Traceability:** Improved asset accuracy through a comprehensive audit of Hexnode and BambooHR records.

Truck Center Automotive Equipments

19 years 3 months

Technology Development Manager

December 2019 - Present (6 years 5 months)

Araucária, Parana, Brasil

Technologies & Strategic Leadership

Spearheaded the architectural evolution and technological roadmap for automotive diagnostic solutions, bridging the gap between hardware engineering and scalable software ecosystems.

Software Engineering & Architecture

- **Product Ecosystem:** Lead Architect for the 3D Aligner and Geometria software suites, overseeing full-stack development in .NET C# and Delphi.
- **Computer Vision:** Engineered advanced image processing pipelines using OpenCV and AForge, integrating OCR detection for automated data capture.
- **Systems Design:** Responsible for the end-to-end architecture and planning of new-to-market automotive diagnostic tools.

Project & Strategic Management

- **Agile Leadership:** Directed software development lifecycles (SDLC) using Scrum methodologies, managing project timelines, and cross-functional teams.
- **Strategic Partnerships:** Established and managed key alliances with global solution providers to enhance product capabilities.
- **Business Expansion:** Led the development of innovative software for new product lines, ensuring market competitiveness and continuous improvement of legacy systems.

Fiscal Innovation & Governance

- Tax Incentives (Lei do Bem): Successfully implemented and managed "Lei do Bem" and "Ex-tarifário" protocols, securing government incentives by qualifying R&D projects.
- Compliance & ROI: Navigated complex regulatory landscapes to ensure product development was both tax-efficient and compliant with national standards.

IT Manager

January 2011 - December 2019 (9 years)

Araucária, Paraná, Brasil

IT Management & Operational Innovation

Directed critical IT infrastructure and the evolution of the company's technology stack, aligning core systems (ERP/CRM) with digital growth strategies.

Infrastructure & Core Systems

- Ecosystem Management: Led IT infrastructure operations and the administration of vital systems, including Active Directory and Korp ERP.
- Industrial Software Development: Engineered custom software for industrial control and management using .NET C#, Delphi, and SQL Server.
- Team Leadership: Managed the IT department staff, prioritizing operational efficiency and the implementation of technological innovations.

Growth & Digital Performance

- Performance Marketing: Orchestrated online advertising campaigns via Google Ads, focusing on conversion optimization and web visibility results.
- Sales Strategy: Collaborated on the design of sales incentive campaigns and the development of high-impact merchandising materials.
- Digital Transformation: Bridged the gap between technology and commercial goals, ensuring CRM tools and automation directly supported revenue objectives.

System Administrator

February 2007 - January 2011 (4 years)

ERP Implementation & Data Migration

Orchestrated the digital transformation of the company's operations by leading the deployment of its first unified ERP system, integrating all departments into a single data ecosystem.

Systems Integration & Development

- Full-Scale Deployment: Led the end-to-end implementation of the Octopus ERP, successfully onboarding all business units and standardizing cross-departmental workflows.
- Custom Module Engineering: Developed and optimized specialized ERP modules using Pascal Delphi and SQL to meet specific business logic requirements.
- Strategic Database Migration: Managed the complex migration of legacy data from multiple disparate systems into a centralized SQL Server and Oracle environment, ensuring data integrity and zero downtime.

Esense Sistemas

Software Developer

January 2006 - June 2006 (6 months)

Curitiba, Paraná, Brasil

Java Development & Oracle Database Administration

Combined backend software engineering with advanced database management to enhance the performance and functionality of the Compiere ERP ecosystem.

ERP Development & Engineering

- System Architecture: Developed and implemented new functionalities for the Compiere ERP using Java, ensuring alignment with business requirements and scalability.
- Backend Logic: Engineered complex business rules and system enhancements to streamline operational workflows.

Database Administration (DBA) & Optimization

- Oracle Management: Served as the Oracle DBA, responsible for the health, security, and maintenance of the ERP's database environment.
- Advanced Data Engineering: Designed and optimized sophisticated queries, views, and stored procedures to improve system performance and data retrieval.
- Data Integrity: Managed database schemas and performance tuning to support high-availability operations.

Education

Universidade Tecnológica Federal do Paraná

Pós-graduação Lato Sensu - Especialização, MBA em Engenharia de Software · (August 2021 - October 2022)

Faculdade de Tecnologia Opet

Ensino Superior, Sistemas de Informação · (March 2005 - March 2008)

Universidade Positivo

Pós-Graduação em Banco de Dados
